

Devine Professional 25

A specialized silica sand, garners high popularity for its application as a medium-fine top dressing, rootzone sand, or where a medium-fine enhancement option is needed. Crafted through Devine's unique production process, Professional 25 showcases a leading medium-fine percolation rate. Devine's specialist sands stand as a testament to market-leading quality and consistency across a comprehensive range of products and applications.

Devine Professional 25

Sport

- Golf

Advantages/Utilizations:

- Highly sought-after medium fine top dressing sand choice

Usages:

- Ideal for moist top dressing and amelioration/rootzone sand applications

Industries:

- Sports and leisure

Offered in:

- Loose: bulk tippers

Loose: bulk bags

Saturated hydraulic conductivity: 1041mm/hr

Specific gravity: 2.69 Mg/m³

Uncompacted bulk density: 1.49 t/m³

Nominal effective size: 0.16-0.38mm

Uniformity coefficient: <2.3mm

Sand is a naturally occurring product, therefore colour may vary.
